

Location: Warwick, Western Australia
 Category: Recreation
 Client: Churches of Christ Sport and Recreation Association
 Construction Value: \$8 million
 Construction Period: 11 months

The Brief, as determined by the Client, was to add existing facilities adjacent to the existing Leisure Centre and to make upgrades to some existing facilities.

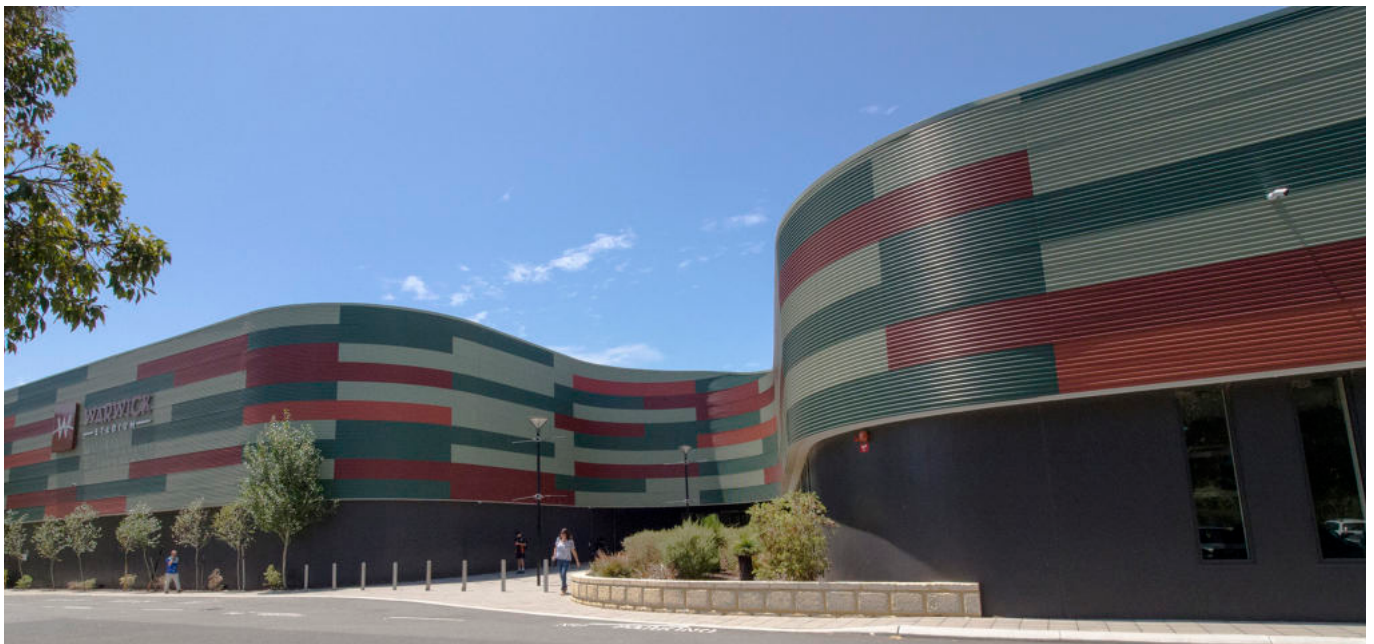

Four new combined netball/basketball courts were accommodated in a new extension to the existing centre. One of the new courts was required to serve as the home court for the Stirling Senators in the State Basketball League. As such, the flooring, scoring, spectator seating and players facilities were required to meet the League standards.

Other works included:

- New change rooms, showers and toilet facilities
- New gym and fitness centre to be leased to commercial gym operator
- Refurbishment and expansion of the centre administration and management offices
- Relocation and upgrade of café and seating
- Relocation and upgrade of crèche

The extension of Warwick Stadium has allowed the expansion of the sporting programmes and provided a high-standard facility for the State Basketball League games. The Stadium is fully booked during the week and on weekends. It caters for school and club programmes and recreational competitions. The new café and crèche has created a place for parents to socialise after a game while young children are cared for by stadium staff.

The success of the new architectural identity has allowed the stadium managers to expand their services to new associations. With the allied health facilities, fitness club, catering and FIBA compliant practices courts, Warwick Stadium has been approached by visiting NBL clubs to use their facilities as a training base for Perth games.
